

Fristam's comprehensive programme³

There's nothing we can't pump!

FP
Centrifugal pump

FPH
High-pressure centrifugal pump

FZ
Self-priming liquid ring pump

FPC
Hybrid centrifugal pump

FPM/FSM
Magnetic-coupling centrifugal pump

FM
Multistage centrifugal pump

FK
Positive displacement pump

FKL
Circumferential piston pump

FL
Positive displacement pump

FDS
Double-screw pump

FDS-TSG
Twin-gear double-screw pump

FSP
Shear pump

PE
Powder intake

PL
Powder dissolver

PM/PMV
Powder mixer

Our comprehensive approach to global service

When Friederich Stamp started manufacturing his first cream-and-cheese vats and refrigeration units for dairies in 1909, he certainly would have never imagined that his workshop could evolve into such a cosmopolitan international company. But more than a century later, Fristam is recognised as a leading global manufacturer with a complete range of superior hygienic pumps and mobile mixing stations, staffed with experts providing tailored solutions to customers in every industrial corner of the planet.

At Fristam, we are proud to offer much more than carefully designed pumps, manufactured according to the highest standards of German craftsmanship. Our approach is to develop flawlessly reliable solutions, specifically tailored to your system, made to measure and perfectly adapted to your applications.

COMPREHENSIVE PRODUCT RANGE

Fristam offers you twelve lines of hygienic double-screw, positive displacement, centrifugal and shear pumps, as well as powder mixers, covering almost every conceivable application.

Each series has been crafted to exceed the most stringent standards. Our products are thought out to the last detail, and each unit is subjected to an incredibly demanding test programme.

Fristam's superior centrifugal pumps are designed to deliver reliable performance even in ranges where other providers need to employ rotary lobe pumps.

Our series of positive displacement pumps includes the Fristam FL3 featuring unique helix-shaped triwing rotary lobes. They ensure an almost perfectly steady stream and exceptionally gentle treatment of your product.

The Fristam FDS series has been refined down to the most minute detail, setting new standards in double-screw technology.

COMPREHENSIVE UNDERSTANDING OF ALL SYSTEM ASPECTS

Before we start to build a pump, we get a handle on our client's processes. We seek a profound understanding of procedures and interrelations, including all technical aspects of your system.

This comprehensive approach to design, construction and installation is unique to Fristam.

Our aim is to create no more and no less than the perfect solution tailored to your situation and your requirements.

We manufacture your pump according to the highest standards, using only materials and components of the highest quality. As a result, each Fristam pump is a bespoke masterpiece.

Fristam's development, design, procurement, production and distribution, as well as quality management and assurance, can all be found under one roof. Consequently, we are able to ensure the highest level of quality in every stage of the process.

COMPREHENSIVE SERVICE

Our service to you begins with a thorough analysis of your system and accompanies you throughout your pump's life cycle. We'll assist you with our expertise and dedication throughout design, construction and assembly, and beyond the installation and commissioning of your pump.

For more than a hundred years, we have archived the technical drawings of every single Fristam pump and the experiences with it.

Thus, we have access to a unique pool of knowledge that we use in everything from process-related consulting in support of your daily operations down to the express delivery of perfectly matched original Fristam spare parts.

We keep an extensive stock of components at hand. And we are able to quickly manufacture any specific pieces according to the construction details kept in our archives, even for pumps we built more than 30 years ago.

The result is maximum durability and reliability throughout the full lifespan of your Fristam pump.

It takes more than know-how to produce true quality

Our commitment to delivering the world's best pumps and mixing units is supported by a philosophy of individualised offerings, top quality, the relentless pursuit of the optimal solution, and responsibility for our people and our planet.

INDIVIDUALITY BY NATURE

In a world where products and services have become ever more standardised and interchangeable, we at Fristam are proud to go the opposite way.

In spite of our international presence, we are among the last independent manufacturers that have not become part of a global group. Current owners and managing partners Wolfgang Stamp and Joachim Friedsch are the fourth generation to take the reins on the family business from their great-grandfather, Friederich Stamp, who established our company in 1909.

Individuality is in our genes. Not only is it reflected in our product range, but you'll also experience it on a personal level with each member of our staff.

Just like our pumps, they come in all shapes and sizes. We take pride in the fact that every Fristam employee is not only highly qualified but also a strong individual.

QUALITY FOR SUSTAINABILITY

Our roots in the dairy industry have firmly anchored our pursuit of the highest levels of quality and hygiene in our day-to-day business.

Fristam's staff live by these principles. All our processes are geared to meeting and exceeding the highest current standards, from design and manufacturing to the strict testing and inspection procedures each individual machine must undergo before it leaves our premises. Fristam pumps have a reputation for exceptional durability, with many still running smoothly and reliably after more than 30 years of operation.

Our machines are laid out for the optimal operating point, which makes them especially energy-efficient.

We regard both durability and low energy consumption as a matter of responsibility for future generations.

Joachim Friedsch, Wolfgang Stamp
Owners

A PRINCIPLE OF PASSION

Being an owner-managed company, we understand all too well that the most important component of a perfect pumping solution is passion and pride in all areas of the business.

Our customers often say that they perceive our employees' commitment as exceptional, and that they experience them as reliable partners who persist with their efforts to find the perfect technical solution for every conceivable pumping problem.

We are proud to have gained the trust of the most prestigious companies in the food, drink and pharmaceuticals industries around the globe.

And we shall do everything we can to repay that trust by providing our customers with superior technical expertise and a highly individual service from dedicated people.

A quality awareness that is reflected along the entire value chain has made us the leading provider of high-quality pumps and mobile mixing plants for hygienic applications. Around the world, top companies in all kinds of industries appreciate Fristam's comprehensive programme³. With every new project and every pump, we intend to deliver on our promise of uncompromising quality and complete customer satisfaction.

Wherever you need us, we'll be there, by your side

Fristam is a cosmopolitan company, acting globally. Consequently, we regard it as a matter of course to be at your disposal with our closely knit distribution and customer services network in every industrial corner of the planet.

SPECIFIC LOCAL KNOW-HOW

With our subsidiaries and numerous special agencies, we make sure that you are well taken care of around the globe.

Our staff's expertise extends not only to many years of industry experience but also to profound know-

ledge regarding local specifics of their respective countries.

HANDS-ON SUPPORT

Fristam's international presence ensures that you receive efficient service wherever and whenever you need it. In almost all industrial nations, qualified specialists will

support you on site with their expertise along with pumps and spare parts.

This makes Fristam your reliable worldwide partner for stainless-steel pumping solutions of the highest quality.
